

Neo Flex Bailer

Neo Flex Bailer is placed between standard Neo bailer joints to allow for plug-back operations in corkscrewed or doglegged tubing operations where standard bailer will not work. The flex joint can be placed between standard 5 ft or 10 ft sections of bailer. The standard stiff toolstring length is reduced with the use of the Neo Flex Bailer.

Neo Flex Bailer Features & Benefits:

- Reduces stiff toolstring length to accommodate corkscrew tubing operations
- Number of runs can be reduced due to the ability to run longer flex bailer systems

Bailer Size	Flex Joint OD (in.)	Flex Joint ID (in.)	Make-up Length (in.)
1 3/8 "	1.375	0.63	12.00
1 5/8 "	1.625	0.78	12.00
2 "	2.00	1.13	12.00
