Permanent NeoPEPs are thru-tubing mechanical bridge plugs that pass thru small restrictions and set in casing and openhole diameters up to 3½ times their run-in diameter. Standard and NACE MR0175 Compliant Plugs are available.

**NeoPEPs can be run and set on electric line, slickline, and coiled tubing.**

**NeoPEPs facilitate low cost operations that were never before possible.**

Plug removal would require drilling and/or milling, followed by pumping, of the plug anchor system.

**NeoPEPs have robust anchor systems and elastomeric seals that provide immediate pressure isolation upon setting in casing. Like conventional cast iron bridge plugs, cement must be placed atop NeoPEPs if permanent long-term pressure isolation is required.**

**NeoProducts provides all the non-explosive tools needed for zonal isolation projects;**

- High-Expansion Positive-sealing Elastomeric Plug (NeoPEP)
- NeoLong-Stroke Setting Tool (NeoHST)
- Non-Explosive Dump Bailer Systems (NeoBB & NeoHybridPDB)
- High Shear Bond Cement Slurry Kits (17 - 20 ppg expanding NeoSuperSlurry)

**NeoPEPs can be set in open holes, cased holes, perforated casing intervals, and gravel packs.**

View the Permanent NeoPEP animation, [pick here](#).

Contact NeoProducts for information regarding Permanent NeoPEPs and their non-explosive setting tools (NeoHSTs).

For 1-3/4” NeoPEPs, except for the 7” NeoPEP size, a 1.71” run-in diameter model is available upon special request.

### Applications

- Rigless zonal isolations and recompletions
- Isolate cross-flow & thief zones
- Water production shut-off
- X-mas tree repairs & replacements
- Wellhead repairs & replacements
- Tubing string repairs and replacements
- Base for frack jobs
- Base for chemical stimulation jobs
- Base for thru-tubing gravel packs
- T&A and P&A operations

### Benefits

- **NeoPEPs facilitate low cost operations that were never before possible.**
- Eliminates the burdens related to the presence of, transport and use of explosives
- **NeoPEPs facilitate optimal exploitation of recoverable reserves (especially applicable to horizontal wells)**

### Features

- Run thru small restrictions, set in casing and provide ΔP seal
- Removable via drilling and/or milling
- 100% Non-explosive isolation operations, using;
  - Non-explosive setting tool
  - Non-explosive cement plug placement atop NeoPEP
    - High shear bond cmt plug assures long-term isolation
- Up to 3-1/2 : 1 expansion ratio
- Robust Bi-directional anchor system
- Instant pressure isolation
- Standard and NACE MR0175 Compliant Plugs are available.

*The 1-3/4" NeoPEP can pass through a minimum restriction of 1.813” and greater ID.  
** This value is the maximum differential pressure at the middle of the Casing ID range for the plug without cement at 250°F.  
*** These crossflow limits are referring to crossflow from the top of the NeoPEP to the bottom. Contact NeoProducts if you have bottom to top crossflow. The differential pressure between the two perforations must not exceed the differential pressure rating of the NeoPEP.
